In 1990 an important conference, titled the World Conference on Education for All (WCEFA), was convened in Jomtien, Thailand by the World Bank, UNESCO, UNICEF and UNDP. The conference brought together some 1500 people representing 155 governments, 33 intergovernmental bodies, and 125 non-governmental organizations (NGOs), institutes, and foundations. Organized in response to the widespread concern over the deterioration of education systems during the 1980s, the Conference concluded with the unanimous adoption of the "World Declaration on Education for All" and endorsed a "Framework for Action to Meet Basic Learning Needs."¹ Through these two texts, the world community renewed its commitment to ensuring the rights of all people to education and knowledge.

Two things were unique about this initiative:

1. *The breadth of its definitions of what is needed to make education available to all.* In addition to calling for universal access to schooling for all children, the declaration reaffirms that "every person—child, youth and adult—[should] be able to benefit from educational opportunities designed to meet their basic learning needs." These include "both essential learning tools, such as

literacy, oral expression, numeracy and problem solving, and the basic learning content (knowledge, skills, values and attitudes) required by human beings to be able to survive, to develop their full capacities, to live and work in dignity, to participate fully in development, to improve the quality of their lives, to make informed decisions, and to continue learning."

The declaration reflects its grounding in the realities of people's diverse needs by affirming that: "the scope of basic learning needs and how they should be met varies with individual countries and cultures, and inevitably changes with the passage of time."

The Declaration affirms the importance of early learning, by stating that "learning begins at birth. This calls for early childhood care and initial education. These can be provided through arrangements involving families, communities, or institutional programs, as appropriate."

2. Its focus on action. Countries were encouraged to formulate specific plans and policies based on the Framework for Action. To maintain the momentum generated at the WCEFA, an International Consultative Forum on EFA was established to promote and monitor the EFA goals and to facilitate information-sharing among countries, agencies and NGOs. The Forum Secretariat, based at UNESCO headquarters, is charged with global monitoring and promotion activities, and with organizing further meetings, publishing a bulletin, and maintaining a database on EFA indicators and activities. (See Related Resources for information on these).

As part of the action initiative, the Consultative Group Secretariat and most of the CG sponsoring members have played an active role in promoting EFA-inspired policies and projects supporting young children, and their families and communities.

The document excerpted below was adopted by the World Conference on Education for All, March 1990 in Jomtien, Thailand.

Meeting Basic Learning Needs: Preamble

More than 40 years ago, the nations of the world, speaking through the Universal Declaration of Human Rights, asserted that "everyone has a right to education". Despite notable efforts by countries around the globe to ensure the right to education for all, the following realities persist:

- More than 100 million children, including at least 60 million girls, have no access to primary schooling;
- More than 960 million adults, two-thirds of whom are women, are illiterate, and functional illiteracy is a significant problem in all countries, industrialized and developing;
- More than one-third of the world's adults have no access to the printed knowledge, new skills and technologies that could improve the quality of their lives and help them shape, and adapt to, social and cultural change; and

- More than 100 million children and countless adults fail to complete basic education programmes; millions more satisfy the attendance requirements but do not acquire essential knowledge and skills.

At the same time, the world faces daunting problems, notably: mounting debt burdens, the threat of economic stagnation and decline, rapid population growth, widening economic disparities among and within nations, war, occupation, civil strife, violent crime, the preventable deaths of millions of children and widespread environmental degradation. These problems constrain efforts to meet basic learning needs, while the lack of basic education among a significant proportion of the population prevents societies from addressing such problems with strength and purpose.

These problems have led to major setbacks in basic education in the 1980s in many of the least developed countries. In some other countries, economic growth has been available to finance education expansion, but even so, many millions remain in poverty and unschooled or illiterate. In certain industrialized countries, too, cutbacks in government expenditure over the 1980s have led to the deterioration of education.

Yet the world is also at the threshold of a new century, with all its promise and possibilities. Today, there is genuine progress toward peaceful detente and greater cooperation among nations. Today, the essential rights and capacities of women are being realized. Today, there are many useful scientific and cultural developments. Today, the sheer quantity of information available in the world—much of it relevant to survival and basic well-being—is exponentially greater than that available only a few years ago, and the rate of its growth is accelerating. This includes information about obtaining more life-enhancing knowledge—or learning how to learn. A synergistic effect occurs when important information is coupled with another modern advance—our new capacity to communicate.

These new forces, when combined with the cumulative experience of reform, innovation, research and the remarkable educational progress of many countries, make the goal of basic education for all—for the first time in history—an attainable goal.

Therefore, we participants in the World Conference on Education for All, assembled in Jomtien, Thailand, from 5 to 9 March, 1990:

Recalling that education is a fundamental right for all people, women and men, of all ages, throughout the world;

Understanding that education can help ensure a safer, healthier, more prosperous and environmentally sound world, while simultaneously contributing to social, economic, and cultural progress, tolerance, and international cooperation;

Knowing that education is an indispensable key to, though not a sufficient condition for, personal and social improvement;

Recognizing that traditional knowledge and indigenous cultural heritage have value and validity in their own right and a capacity to both define and promote development;

Acknowledging that, overall, the current provision of education is seriously deficient and that it must be made more relevant and qualitatively improved, and made universally available;

Recognizing that sound basic education is fundamental to the strengthening of higher levels of education and of scientific and technological literacy and capacity and thus to self-reliant development; and

Recognizing the necessity to give to present and coming generations an expanded vision of, and a renewed commitment to, basic education to address the scale and complexity of the challenge;

proclaim the following

**World Declaration on Education for All:
Meeting Basic Learning Needs**

Education for All: The Purpose

■ ARTICLE 1: MEETING BASIC LEARNING NEEDS

1. Every person—child, youth, and adult—shall be able to benefit from educational opportunities designed to meet their basic learning needs. These needs comprise both essential learning tools (such as literacy, oral expression, numeracy, and problem solving) and the basic learning content (such as knowledge, skills, values, and attitudes) required by human beings to be able to survive, to develop their full capacities, to live and work in dignity, to participate fully in development, to improve the quality of their lives, to make informed decisions, and to continue learning. The scope of basic learning needs and how they should be met varies with individual countries and cultures, and inevitably, changes with the passage of time.

2. The satisfaction of these needs empowers individuals in any society and confers upon them a responsibility to respect and build upon their collective cultural, linguistic, and spiritual heritage, to promote the education of others, to further the cause of social justice, to achieve environmental protection, to be tolerant towards social, political and religious systems which differ from their own, ensuring that commonly accepted humanistic values and human rights are upheld, and to work for international peace and solidarity in an interdependent world.

3. Another and no less fundamental aim of educational development is the transmission and enrichment of common cultural and moral values. It is in these values that the individual and society find their identity and worth.

4. Basic education is more than an end in itself. It is the foundation for lifelong learning and human development on which countries may build, systematically, further levels and types of education and training.

Education for All: An Expanded Vision and a Renewed Commitment

■ ARTICLE 2: SHAPING THE VISION

1. To serve the basic learning needs of all requires more than a recommitment to basic education as it now exists. What is needed is an "expanded vision" that surpasses present resource levels, institutional structures, curricula, and conventional delivery systems while building on the best in current practices. New possibilities exist today, which result from the convergence of the increase in information and the unprecedented capacity to communicate. We must seize them with creativity and a determination for increased effectiveness.

2. As elaborated in Articles 3-7, the expanded vision encompasses:

- Universalizing access and promoting equity;
- Focussing on learning;
- Broadening the means and scope of basic education;
- Enhancing the environment for learning;
- Strengthening partnerships.

3. The realization of an enormous potential for human progress and empowerment is contingent upon whether people can be enabled to acquire the education and the start needed to tap into the ever-expanding pool of relevant knowledge and the new means for sharing this knowledge.

■ ARTICLE 3: UNIVERSALIZING ACCESS AND PROMOTING EQUITY

1. Basic education should be provided to all children, youth and adults. To this end, basic education services of quality should be expanded, and consistent measures must be taken to reduce disparities.

2. For basic education to be equitable, all children, youth and adults must be given the opportunity to achieve and maintain an acceptable level of learning.

3. The most urgent priority is to ensure access to, and improve the quality of, education for girls and women, and to remove every obstacle that hampers their active participation. All gender stereotyping in education should be eliminated.

4. An active commitment must be made to removing educational disparities. Underserved groups—the poor; street and working children; rural and remote populations; nomads and migrant workers; indigenous people; ethnic, racial, and linguistic minorities; refugees; those displaced by war; and people under occupation—should not suffer any discrimination in access to learning opportunities.

5. The learning needs of the disabled demand special attention. Steps need to be taken to provide equal access to education to every category of disabled persons as an integral part of the education system.

■ ARTICLE 4: FOCUSING ON LEARNING ACQUISITION

Whether or not expanded educational opportunities will translate into meaningful development—for an individual or for society—depends ultimately on whether people actually learn as a result of those opportunities, i.e., whether they incorporate useful knowledge, reasoning ability, skills, and values. The focus of basic education must, therefore, be on actual learning acquisition and outcome, rather than exclusively upon enrolment, continued participation in organized programmes and completion of certification requirements. Active and participatory approaches are particularly valuable in assuring learning acquisition and allowing learners to reach their fullest potential. It is, therefore, necessary to define acceptable levels of learning acquisition for educational programmes and to improve and apply systems of assessing learning achievement.

■ ARTICLE 5: BROADENING THE MEANS AND SCOPE OF BASIC EDUCATION

The diversity, complexity, and changing nature of basic learning needs of children, youth and adults necessitates broadening and constantly redefining the scope of basic education to include the following components:

- *Learning begins at birth.* This calls for early childhood care and initial education. These can be provided through arrangements involving families, communities, or institutional programmes, as appropriate.

- *The main delivery system for the basic education of children outside the family is primary schooling.* Primary education must be universal, ensure that the basic learning needs of all children are satisfied, and take into account the culture, needs and opportunities of the community. Supplementary alternative programmes can help meet the basic learning needs of children with limited or no access to formal schooling, provided that they share the same standard of learning applied to schools, and are adequately supported.

- *The basic learning needs of youth and adults are diverse and should be met through a variety of delivery systems.* Literacy programmes are indispensable because literacy is a necessary skill in itself and the foundation of other life skills. Literacy in the mother-tongue strengthens cultural identity and heritage. Other needs can be served by: skills training, apprenticeships, and formal and non-formal education programmes in health, nutrition, population, agricultural techniques, the environment, science, technology, family life, including fertility awareness, and other societal issues.

- All available instruments and channels of information, communications and social action could be used to help convey essential knowledge and inform and educate people on social issues. In addition to the traditional means, libraries, television, radio and other media can be mobilized to realize their potential towards meeting basic education needs of all.

These components should constitute an integrated system—complementary, mutually reinforcing, and of comparable standards, and they should contribute to creating and developing possibilities for lifelong learning.

■ ARTICLE 6: ENHANCING THE ENVIRONMENT FOR LEARNING

Learning does not take place in isolation. Societies, therefore, must ensure that all learners receive the nutrition, health care, and general physical and emotional support they need in order to participate actively in and benefit from their education. Knowledge and skills that will enhance the learning environment of children should be integrated into community learning programmes for adults. The education of children and their parents or other caretakers is mutually supportive and this interaction should be used to create, for all, a learning environment of vibrancy and warmth.

■ ARTICLE 7: STRENGTHENING PARTNERSHIPS

National, regional, and local educational authorities have a unique obligation to provide basic education for all, but they cannot be expected to supply every human, financial or organizational requirement for this task. New and revitalized partnerships at all levels will be necessary: partnerships among all sub-sectors and forms of education, recognizing the special role of teachers and that of administrators and other educational personnel; partnerships between education and other government departments, including planning, finance, labour, communications, and other social sectors; partnerships between government and non-governmental organizations, the private sector, local communities, religious groups, and families. The recognition of the vital role of both families and teachers is particularly important. In this context, the terms and conditions of service of teachers and their status, which constitute a determining factor in the implementation of education for all, must be urgently improved in all countries in line with the joint ILO/UNESCO Recommendation Concerning the Status of Teachers (1966). Genuine partnerships contribute to the planning, implementing, managing and evaluating of basic education programmes. When we speak of "an expanded vision and a renewed commitment," partnerships are at the heart of it.

Education for All: the Requirements

■ ARTICLE 8: DEVELOPING A SUPPORTING POLICY CONTEXT

1. Supportive policies in the social, cultural, and economic sectors are required in order to realize the full provision and utilization of basic education for individual and societal improvement. The provision of basic education for all depends on political commitment and political will backed by appropriate fiscal measures and reinforced by educational policy reforms and institutional strengthening. Suitable economic, trade, labour, employment and health policies will enhance learners' incentives and contributions to societal development.

2. Societies should also insure a strong intellectual and scientific environment for basic education. This implies improving higher education and developing scientific research. Close contact with contemporary technological and scientific knowledge should be possible at every level of education.

■ ARTICLE 9: MOBILIZING RESOURCES

1. If the basic learning needs of all are to be met through a much broader scope of action than in the past, it will be essential to mobilize existing and new financial and human resources, public, private and voluntary. All of society has a contribution to make, recognizing that time, energy and funding directed to basic education are perhaps the most profound investment in people and in the future of a country which can be made.

2. Enlarged public-sector support means drawing on the resources of all the government agencies responsible for human development, through increased absolute and proportional allocations to basic education services with the clear recognition of competing claims on national resources of which education is an important one, but not the only one. Serious attention to improving the efficiency of existing educational resources and programmes will not only produce more, it can also be expected to attract new resources. The urgent task of meeting basic learning needs may require a reallocation between sectors, as, for example, a transfer from military to educational expenditure. Above all, special protection for basic education will be required in countries undergoing structural adjustment and facing severe external debt burdens. Today, more than ever, education must be seen as a fundamental dimension of any social, cultural, and economic design.

■ ARTICLE 10: STRENGTHENING INTERNATIONAL SOLIDARITY

1. Meeting basic learning needs constitutes a common and universal human responsibility. It requires international solidarity and equitable and fair economic relations in order to redress existing economic disparities. All nations have valuable knowledge and experiences to share for designing effective educational policies and programmes.

2. Substantial and long-term increases in resources for basic education will be needed. The world community, including intergovernmental agencies and institutions, has an urgent responsibility to alleviate the constraints that prevent some countries from achieving the goal of education for all. It will mean the adoption of measures that augment the national budgets of the poorest countries or serve to relieve heavy debt burdens. Creditors and debtors must seek innovative and equitable formulae to resolve these burdens, since the capacity of many developing countries to respond effectively to education and other basic needs will be greatly helped by finding solutions to the debt problem.

3. Basic learning needs of adults and children must be addressed wherever they exist. Least developed and low-income countries have special needs which require priority in international support for basic education in the 1990s.

4. All nations must also work together to resolve conflicts and strife, to end military occupations, and to settle displaced populations, or to facilitate their return to their countries of origin, and ensure that their basic learning needs are met. Only a stable and peaceful environment can create the conditions in which every human being, child and adult alike, may benefit from the goals of this Declaration.

We, the participants in the World Conference on Education for All, reaffirm the right of all people to education. This is the foundation of our determination, singly and together, to ensure education for all.

We commit ourselves to act cooperatively through our own spheres of responsibility, taking all necessary steps to achieve the goals of education for all. Together we call on governments, concerned organizations and individuals to join in this urgent undertaking.

The basic learning needs of all can and must be met. There can be no more meaningful way to begin the International Literacy Year, to move forward the goals of the United Nations Decade of Disabled Persons (1983-92) the World Decade for Cultural Development (1988-97), the Fourth United Nations Development Decade (1991-2000), of the convention on the Elimination of Discrimination against Women and the Forward Looking Strategies for the Advancement of Women, and of the Convention on the Rights of the Child. There has never been a more propitious time to commit ourselves to providing basic learning opportunities for all the people of the world.

We adopt, therefore, this *World Declaration on Education for All: Meeting Basic Learning Needs* and agree on the *Framework for Action to Meet Basic Learning Needs*, to achieve the goals set forth in this *Declaration*.

ENDNOTES ... 12

The Jomtien World Conference on Education for All (WCEFA), convened in 1990, was an attempt to improve education, especially in developing countries. Its basic message was that developing countries and international agencies should confront the problem of illiteracy and educational decline by concentrating energies and investment in basic education.²

According to the "Framework for Action to Meet Basic Learning Needs" developed at WCEFA, national basic education would be composed of four pillars:

- a four-year concentrated, primary cycle for all children which would provide basic reading, writing, numeracy and life skills, both family and environmental;
- non-formal education for children and adults not reached by schools, especially women;
- expansion and improvement of early child development, care and education services;

- further teaching of basic knowledge and life skills to all the population through the use of the various communication channels.

What is unique about this initiative is that the definition of basic education is broader and more attuned to the realities of people's lives than earlier attempts to address these issues. Thus, although calling for educational investments in the primary cycle where the bases of literacy and numeracy are laid, the Jomtien initiative also provides an enlarged vision of national education. Education should reach out to all sections of society, should use non-formal approaches where necessary, and, in the case of early childhood, should include social inputs and community-based approaches.

The initiative goes beyond asking countries (and donors) to invest more money in education—it calls for a comprehensive re-thinking of priorities in defining basic education. This approach represents a clear recognition that the formal schooling model is inadequate, in and of itself, to address all the education needs and to prepare people to address social problems in developing countries.

Despite real success in providing education to growing numbers of children and adults,³ the outlook at the end of the eighties for education throughout the world was giving rise to serious misgivings. In the developing world, four fifths of the world's children were now surviving their first year of life, and their learning capacity was much diminished by poverty in all its forms. Educational progress made from 1960 to the early 1980s had to a large extent been overtaken by population gains. Over 100 million children did not have access to primary education, and of those who did, almost 50% dropped out before they were really literate or numerate. To add to the difficulties of education ministries, there was the realization that of the non-schooled children, over two-thirds were girls, especially in South East Asia and the Middle East, a factor destined to have serious educational and social consequences for the next generation of children. (UNICEF 1992)

Although the picture was infinitely better in the industrialized world, the situation was far from ideal. More children than ever were being educated. These children enjoyed greater intelligence, better health and a higher standard of living than ever before in human history. Yet, paradoxically, there was growing dissatisfaction with education, and evidence of a decline in learning achievement. More and more casualties of national education systems were appearing, not only in the growing ranks of barely literate and unemployed youth, but even more seriously, in the spiralling delinquency figures in the poor areas of the large cities. In short, although in Western democracies education reforms had become a common feature of each change in government, they generally failed to achieve the results intended.

Another recommendation made by the Jomtien initiative was that there should be a serious renewal of education management. At the national level, countries following the Education for All (EFA) process should:

- hold regular, national-level policy meetings on EFA;
- create information campaigns to sensitize the public to the importance of basic education;
- adopt concrete and measurable EFA goals;
- formulate a national strategy or national plan of action covering the development of integrated basic education services;
- create a national body with executive responsibility for promoting and coordinating basic education policies, programmes and services;
- increase significantly national investment in basic education;
- hold pledging conferences with donor countries and agencies in order to bring more resources to basic education.

Is the Jomtien Approach Working?

At the level of the international funding agencies, both the World Bank and the United Nations Development Programme (UNDP) have more than doubled their funding of basic education in the developing world. UNICEF has developed its basic education personnel at national level and has created a central unit at headquarters in New York to coordinate educational activities, including early child development. Its funding of basic education has increased from \$46 million dollars to \$79 million annually.

Similarly, UNESCO has stepped up its funding for basic education bringing it up to \$54 million biennially. With UNICEF, it has created a joint committee for EFA, and together both organizations have embarked on several co-operative programmes, including the ambitious *Nine Most Populous Countries Programme*, focussed on the countries in which the great majority of the world's illiterate people live. In addition, an early childhood and family unit was established.

Reaction to Jomtien has been very positive at the country level as well, and has elicited the formulation of EFA goals by over 100 countries. Over half of those countries have launched some sort of information campaign but far fewer countries have yet taken concrete steps to establish a national EFA mechanism or increase the national budget for basic education. There seems to be a trend toward greater investment in basic education, although it is still too early for data to be complete. Hopes are high that many countries will reach one of the major EFA goals of minimum 80% enrollment by the year 2000.

The following examples are taken from UNESCO's "Status and Trends" report, updating progress toward EFA goals, produced by the EFA Consultative Forum Secretariat:

- Costa Rica's national roundtable on EFA brought together the ministries of education, health, labour, planning and agriculture, as well as private and state universities, non-governmental organizations, educational associations, and aid agencies. It led to the preparation of a national action plan to provide literacy and basic skills training for women, literacy campaigns in educationally deprived areas, an integrated early childhood

development program, education provision for the disabled, and multicultural, bilingual education for indigenous people.

■ Mexico is undertaking a US \$100 million non-formal education project aimed at boosting the efficiency and quality of preschool education in ten of the poorest states of the country. By preparing children from poor families for their entrance to primary school and introducing parent education, Mexico hopes to help 1,200,000 children under the age of 4 to learn better.

■ The Dominican Republic has launched a plan devoted to *rescuing education*: to get all children between 4 and 15 in school by the year 2000 and to drastically cut the dropout rate. School councils will be set up, parent-teacher associations revived, curricula will be overhauled, and teachers' salaries increased. The education ministry has also started a "breakfast-at-school" programme so every child will be given a morning snack, which should lure them off the streets and back into school.

■ In Africa, nine Sahel countries have agreed to tackle their problems in unison. In close dialogue with UNESCO, UNDP, the World Bank and major bilateral donors, this group of countries drew up an action programme to achieve EFA by the year 2000. Through cooperation and joint action in such fields as planning and management, production of learning materials, teacher training and applied research, they intend to overcome their resource constraints and realize important economies of scale.

■ Yet another model endeavor is that of a small island country—Mauritius—whose "Education Master Plan" prepared in the wake of Jomtien, has brought together several donors to assist the country to implement it.

■ In Asia, where three-quarters of the world's illiterate adults live, political support for basic education has been especially strong. India, for example, is launching several large-scale and long-term projects in the country's most educationally deprived states. In Rajasthan, for example, the Lok Jumbish (People's Mobilization) has been set up to achieve EFA goals in 10 years. The US\$7 million programme, of which 50 percent will come from the Swedish International Development Agency (SIDA) and the rest from state and central governments, aims at transferring responsibility for educational management to the village community. Every means, from electronic media to folk theater, are being used, particularly to mobilize women.

■ Nepal is striving to universalize primary education by introducing girls' scholarships, improving teacher training programmes and distributing free books. It is also organizing basic education programmes for adults.

■ Pakistan has launched a new national education plan aimed at improving basic education in the country by involving NGOs and the private sector and by increasing participation rates for girls by 8.8 percent per annum (compared to 2.5 percent for boys). Substantial government financing is being provided to ensure the Plan's success.

■ Countries in the North are also taking action. Ireland, for example, is intensifying its efforts to promote literacy for youths and adults by significantly boosting its budget for this purpose. Special attention will be given to those who have basic literacy skills but do not read and write sufficiently to cope in society. Within school, Ireland is renewing its efforts to

identify and support those children with special learning needs. These measures include improving assessment and remedial services and expanding programmes to involve parents. In addition, Ireland, which prior to Jomtien funneled its educational aid exclusively to technical and higher education, has re-examined its policy and now supports several basic education projects in Africa.

■ In line with Jomtien recommendations, the United States set a number of education goals for the year 2000: that all children will start school ready to learn, that at least 90 percent of high school students will graduate, and that all adult Americans will be literate. A National Education Goals Panel has been set up to monitor progress. Also, a non-governmental organization, the U.S. Coalition for Education for All, has been established to promote EFA awareness and action in the country.

The preceding examples notwithstanding, what has arisen so far in response to the EFA initiative is focussed mostly on the four year primary cycle. There are good reasons for this choice. The primary school network already exists and its potential is great if effectively used. Yet this being said, certain disquieting tendencies are emerging:

■ A RELATIVE NEGLECT OF THE THREE OTHER PILLARS OF BASIC EDUCATION, I.E., NON-FORMAL EDUCATION, EARLY CHILD DEVELOPMENT AND MEDIA EDUCATION

The Jomtien declaration, based on sound and well-documented educational research, recommends action in these three domains, and funding, in fact, is growing slowly. However, a difficulty international agencies encounter when trying to work in these domains is that frequently neither young children nor adults have a Ministry responsible for their education. It is easier for international agencies to work sectorally within an established formal system rather than to launch out into the uncertain waters of non-formal education and early childhood programming. In addition, in countries facing economic austerity, family and community education is notoriously difficult to promote, implement, and evaluate (especially in a context where the media are dominated by commercial concerns).

For this reason, most efforts aimed at young children have been carried out essentially by the major international NGOs in the field of child care and education, such as the Bernard van Leer Foundation and Save the Children. These organizations continue to promote child welfare and parent education through a multitude of cooperative ventures with government and local NGOs. (For additional examples, see the International Directory of Young Child and Family Institutions, UNESCO 1991) Their work has been exemplary in its concentration on the integral development of the child, grass-roots contact, promotion of local expertise, attention paid to community development and social change. (Chetley 1990)

On the other hand, most international donor agencies still tend to concentrate on formal systems, despite the knowledge that the formal education approach rarely reaches the more disadvantaged populations effectively.

Developing countries worldwide are beginning to understand the advantages of improving or establishing health and education services for the very young, in which mothers are actively involved. Though such initiatives have much wider implications, they can be supported by

education ministries as preparation for successful learning, achievement and schooling. Unfortunately as yet, sufficient investment has not emerged from most of the EFA country strategies, despite the fact that the possibility of establishing low-cost national programmes is real and effective models exist. (Myers 1992)

Parental and adult education is even more poorly endowed, although it is clear that community mobilization is essential for successful educational intervention in disadvantaged milieus, in which the majority of the world's children live.

■ THE INABILITY OF EDUCATION MINISTRIES AND FORMAL SCHOOL SYSTEMS TO KEEP PACE WITH POPULATION INCREASES

World population in 1960 was about three billion people, by the end of the century it will be six billion, and will reach, if present trends continue, ten billion by 2050. In the face of such population pressure one must not be overly pessimistic; the tripling of school enrollments since 1960 shows that where there is a will there is a way. Many developing countries have the capacity, the personnel and, most importantly, the political will to finance adequately and manage effectively their formal education systems.

However, the ability of poorer countries to reform and expand formal educational structures remains in doubt, particularly within a context of rapid population increase, growing unemployment and the impoverishment of families. The evidence suggests that many such countries-and large rural or social pockets within successful countries-will need to rely on non-formal education initiatives for many decades to come in order to cope with growing numbers of children.

■ THE PERSISTENCE OF A SCHOOL MODEL OFTEN UNSUITED TO SOCIAL NEEDS

Many developing countries, in an effort to maintain continuity and good standards, have made few changes to the education systems established under colonial rule with their equivalencies to the French baccalaureate or the Cambridge certificates. A characteristic of the traditional, centralized primary school system was to isolate children from parents and local communities in order to socialize them in the national culture, language and values as conceived by the State. Emphasis was placed on certain skills useful to the State, e.g., the acquisition of academic facts and skills more useful in industrialized, urban settings than in daily rural living.

Although parents and local communities were eager to educate their children, they were not encouraged to be active participants in the process. During the seventies and eighties, this model proved inadequate in most developing countries, and led, in addition, to a breakdown in public esteem for education and the school institution. Buildings deteriorated, teachers remained unpaid, teaching materials and schoolbooks fell into short supply. Hence, the call from Jomtien for decentralization of the traditional model, with more emphasis placed on relevance.

The danger remains, however, that the traditional model may-from lack of dynamism or political will-linger on and change more slowly than expected. In most countries, administration, teacher recruitment, curricula and evaluations are still heavily centralized and there is little encouragement of local initiative. In terms of curriculum and pedagogy, rather than extending

the more pedagogically appropriate early childhood model upward to 8 year olds, governments in many countries will choose to extend downward the formal instructional model for use with 3-6 year old children.

The question remains, therefore, how can these weaknesses of public education be overcome, while still striving toward the goal of universal education?

■ THE FAILURE TO ADDRESS THE QUESTION OF EGALITARIAN ACCESS

Although tremendous efforts are being made to discourage gender discrimination in school access, it is clear that relatively few countries have managed to ensure educational access and success for girls. This has serious implications, not only for the girls themselves, but also for future generations of children who will be mothered by uneducated young women.

Mothers, if they are educated in basic life skills, can dramatically change life for their children and inspire social and economic progress in their communities. Studies of the question suggest that the education of mothers in developing countries is as important in its effect as any other educational enterprise. The educational level of the mother has been linked significantly with falling fertility rates, decreasing infant and mother mortality, (Cochrane et al. 1980), enhanced levels of infant and child development, and greater social outcomes for children. (King and Hills 1991)

If one is serious about egalitarian access, intervention programmes need to be put into place for infants and preschool children from disadvantaged milieus. Even by age four, serious inequalities between children have already begun to appear and assessments reveal developmental delay in large numbers of children from poor or minority backgrounds. It has become apparent, particularly as the multi-cultural nature of the industrial economies has increased, that integrated and culturally appropriate intervention at an earlier level is required if all the children of the nation are to be equally cherished, and costly rehabilitation programmes avoided.

Child quality and learning capacity are much diminished by poverty in all its forms. The consequences of poverty on parents and in turn on their children are now well documented. They include poor personal health; low educational attainment including poor knowledge of nutrition, hygiene and health care; social isolation and a tendency to underutilize or have poor access to essential education and health services; a tendency to remain in the poverty trap through long-term unemployment; a tendency to become parents at a younger age; greater likelihood of having high-risk babies, etc. (World Bank 1980)

The psychosocial development of children from such a background is frequently inhibited, leaving them branded already at the age of four as slow learners. More seriously, poor prenatal care of mothers, premature or low-weight births, malnutrition and ill health at the infant stage-all endemic in very poor communities-mark or disable the young child.

A third aspect of access which is often overlooked, not by the Jomtien declaration itself, but in post-Jomtien practice, is that the economic situation in many countries makes education seem impractical to pursue. Even if a government is capable of financing a basic education system, the

social and economic benefits for a child who follows the basic four-year cycle are not immediately evident, especially when educational quality at the primary level is poor and does not lead to a place either in secondary education or in the world of work.

For this reason, improving access involves both preparing children for school—through strengthening the care and support they receive—and rethinking schools to be relevant to the community, the society *and* the individuals they serve. Women's education, attention to the conditions of the poor, and recognition of the inter-connections between an educational program and the society it is preparing students to enter are all crucial.

Support for Young Children and Families Provides a Necessary Foundation for Education for All

Social intervention at the family and community levels, especially through non-formal education initiatives, is not, in our opinion, a luxury item. It is a necessary element in any sound education strategy. This is particularly true in situations dominated by poverty, where a large proportion of children are incapable of benefiting from even excellent instruction when they enter school. In order to improve the active learning capacity⁴ of disadvantaged children several types of intervention are needed which go beyond the locus and range of the traditional school.

■ REACHING CHILDREN THROUGH FAMILIES

The active learning capacity of a child as he or she enters primary school depends to a great extent on the physical, intellectual and social gains that stem from early experience. Medical, psychological, and educational research shows that from conception to age 6 (and in particular, prenatal to three) is the critical period in the human development cycle. Nutritional, sensory motor, psychological or cognitive progress made (or deficits incurred) by children in those early years are interactive and cumulative to a much greater extent than ever again in the life cycle.

The problems which cause difficulty in school, such as lack of good health, sight and hearing defects, lack of concentration, low learning ability, and poor self-esteem, are generally rooted by the age of four when children enter kindergarten. Thus, it is necessary to provide family services that actually reach the poor.

Societal breakdown and educational decline are attributed to many causes: to overstretching of education systems, to social change, to badly prepared immigration policies, etc. These factors are real but secondary, in our opinion, to the growing inability of families to supply health, care, mediation⁵ (significant interactions) and education to children. This failure is reflected in the growing number of children—even in advanced economies suffering from short-term hunger, micronutrient deficiencies or protein energy malnutrition.

Such measures as pre-natal and follow-up health care for young mothers and their children, child health and immunization, social policies that improve labor conditions, social security schemes, parental leave, day-care and family education services, can no longer be seen as social welfare for poor people. They are in fact a question of far-reaching political choice: the recognition of the family unit as the primary provider and educator of children.

Many parents are too poor or too busy trying to survive, and do not realize the importance of their role. Many parents do not realize the profound influence that a healthy diet and a secure and regular home environment has on children. They do not know that their own modelling of values, social skills and curiosity about the world is necessary for their children's subsequent success with learning. They are unaware of the impact their talking to children has on language acquisition, mental awareness and problem-solving abilities.

Many young adults lack the confidence, knowledge and means to be good parents. Hence, it is necessary to provide social support for families. This can be accomplished in large part through expanding non-formal⁶, parent education programmes and making a conscious effort through the media to raise awareness and knowledge levels of essential life-skills.

■ REACHING CHILDREN THROUGH ADEQUATE COMMUNITY SERVICES

Can uneducated parents who live in sordid surroundings, in streets where violence and drug-pushing are the rule, who have neither employment nor self-respect, give education and self-esteem to their children? The answer must be: with great difficulty. Children and families do not exist-or thrive-in a vacuum. They need adequate community services, and in cases of serious neighborhood decay, energetic community intervention. More attention needs to be given to the basic infrastructure in communities, if educational initiatives are to be successful and reach those most in need.

More and more communities must collaborate in the major responsibilities which governments traditionally handled: questions of primary health, the care and education of children, employment, adequate housing, safety and preservation of the environment and attention to the basic needs of all. In fact, as we approach the end of this century, the Welfare State seems to be giving way to a society where families, local communities and NGOs are called to play an important and creative role in providing social support services which the State is reluctant or unable to provide. Obviously, in countries or districts where governmental or municipal services are weak or non-existent, the family and voluntary bodies, such as the NGOs and the churches, play a central role in providing an adequate supportive environment for young children and their families.

■ REACHING CHILDREN MORE REALISTICALLY THROUGH THE SCHOOL

The Education for All initiative has called for recognition that schools (if they wish to serve all) should be more open to community needs. Research would suggest that the schools need to incorporate the following approaches in order to become truly responsive to those in poverty:

- a real attention to early child development, and to the idea that child quality and active learning capacity can best be ensured through good parenting and/or quality pre-school. Recent research (Schweinhart et al. 1993) shows the values of such programmes for children and their necessity for egalitarian access;
- a broad curriculum that will include as well as the three Rs, knowledge of thinking and life skills, basic personal and social values, relevant career training;
- high-quality, remedial programmes to address learning problems of young children before they become habitual and lead into a cycle of failure and low self-esteem;
- parenting and family support: that is, education offered to parents as well as to children. The school should offer or act as a conduit for community support services, in particular to families in need. Among the more important aims of such programmes must be to provide basic health and nutrition services, to improve the status and educational level of women,⁷ to promote the rights of children⁸ either in situations of risk or within a particular society, and to train parents to supplement school instruction by giving their children "the inner engines of learning": that is, personal and social skills such as confidence, motivation, caring, common sense, perseverance and a sense of teamwork, which enable children to learn and achieve in the school context. (Rich 1992)⁹
- a dynamic linking of school, community and local government to tackle questions of social and environmental milieu.

Conclusion

The Jomtien World Conference on Education for All has rightly called attention to improving education through better management and expanded access to primary education systems. In attempting to outline how this might realistically be achieved, it has offered a broader definition, unanimously embraced by the participants, of basic education. Post-Jomtien practice, however, has still failed to embrace the three pillars of the declaration that do not relate directly to formal primary schooling. There are good reasons to believe, however, that in many situations and countries, the call for investment in families and communities, and support for decentralized, nonformal, education initiatives toward parents, may be essential for realistically attaining the goal of education for all.

Endnotes

¹ The views and opinions expressed by the author are not necessarily those of UNESCO and do not in any way commit the organization.

² Although the world illiteracy rate is slowly declining, in absolute terms, the number of illiterates continues to increase and may reach one thousand million by the year 2000.

³ Since 1960, enrollments in primary education have grown from 332 million to 593 million in 1988, an increase mostly taking place in the developing world. For example, in Africa, the enrollment rates for primary schooling doubled in that period. They went from 33% in 1960 to 66% in 1985.

⁴ Active learning capacity is defined as the ability of a child at a given moment to learn. This ability is normally mobilized by the child's natural curiosity and wish to model successful adult figures or peers. Numerous impediments combine to impair it, such as organic and functional learning deficiencies, or equally common, negative environments, bad teaching, etc. (Levinger 1992)

⁵ The concept of mediation is taken from R. Feuerstein's theory of instrumental enrichment. (1980) Here, it is used to denote the time spent by parents, adult family members or older children with young children in interactions in which meaning, concepts, life values and problem-solving abilities are transmitted. These elements are the building blocks of all education.

⁶ The characteristics of successful nonformal approaches are becoming known: active community/parent involvement, small catchment areas, minimal capital costs, knowledge of local conditions and needs, recruitment of para-teachers from the community, short initial training but continued upgrading and support, simplified curricula with emphasis on learning and life skills, regular external inputs from NGOs or administration. (UNICEF 1993, Reaching the Unreached)

⁷ One of the key solutions to population increase is the education of girls and women, but in many regions of the world, such education must still take place through non-formal, community-based programmes aimed at families.

⁸ The Convention on the Rights of the Child has given a real boost to the recognition of the child as an individual with rights both vis-à-vis the family and society at large.

⁹ Some of the better conceived early childhood intervention programmes, such as High/Scope, support the development of these social skills as well as more cognitive ones such as language development, seriation, classification, representation, number, sense of time and spatial relations.

CREATING THE FOUNDATION STONES FOR EDUCATION FOR ALL: ACTION INITIATIVES IN EARLY CHILDHOOD CARE AND DEVELOPMENT

Coordinators' Notebook No. 14, 1993/94

by Robert G. Myers

Why invest in programmes of Early Childhood Care and Development as part of a basic education strategy? Before you can build a house, it is necessary to lay foundation stones to support the entire structure. Before a child enters primary school, a similar foundation must be laid. Embedded within their family, their community, and their cultural values, very young children, (from birth to six) need to be supported in the development of the physical, mental, and social abilities that will enable them to survive and thrive in later years. The successful education of the child during its years of schooling depends to a great degree upon the foundation stones laid during the pre-school years. (from Meeting Basic Learning Needs)

In the first year and one-half following Jomtien, attention of the EFA Consultative Forum and of the Forum Secretariat was directed toward primary school education and literacy, with little attention to the early childhood part of basic learning and education. The first meeting of the EFA Forum, held in Paris in December 1992, did not include early childhood on the agenda. This oversight was corrected with inclusion of the topic at the Second EFA Forum, held in New Delhi, India from September 8 - 10, 1993. The meeting brought together approximately 120 individuals including resource people and representatives of country, agency and NGO

constituencies. The central theme of the meeting, Quality Education for All, was pursued in relation to four main topics: Early Childhood Development; Improving Primary Schooling; Improving Non-formal Education; Financing Quality Basic Education. In addition, there were roundtable discussions dealing with new partnerships in EFA, basic education for girls and women, and the contribution of the media to EFA.

In discussing each of the topics mentioned above, participants were asked to address three cross-cutting themes: gender equality; assessment and monitoring of learning (measuring success); and going to scale.

To prepare for the early childhood portion of the New Delhi Forum, an ad hoc committee was formed. The Bernard van Leer Foundation assumed the role of organizer, assisted by the Secretariat of the Consultative Group on Early Childhood Care and Development. Funding was sought to prepare a handout covering background issues and ECCD strategies (Meeting Basic Learning Needs), case studies, and a video (First Steps, produced by the Aga Khan Foundation) to support participation in the New Delhi meeting by presenters.

As a result of the New Delhi discussions, the following was read into the record as a statement of intent and in order to highlight several topics that arose as areas of priority during the discussion:

"During the Forum a group of institutions and individuals concerned with early childhood learning and development met in order to identify key themes and collaborative actions to pursue following the Forum. The purpose of the collaborative actions would be to strengthen policy, planning and implementation of programs directed toward enhanced learning during the early years, better preparing children for school and life.

The Group emphasized the importance of continuing representation of the early childhood area on the Steering Committee of the EFA Forum and in future EFA Fora. We began by identifying lines of action already being pursued by organisations within the Group and took into account suggestions for action that emerged during the Forum, both in the plenary sessions and in informal discussions with participants. Extending collaborative effort was recommended within three general lines of action:

- strengthening human and financial resources;
- strengthening the knowledge and information base;
- linking early childhood development with other program lines.

Examples of priority issues to be worked on were also identified. These include:

- strengthening regional and national centres which support quality in early childhood programs;
- costs and financing;
- development and use of indicators of early development in order to measure progress toward goals;

- collaboration of early childhood programs with primary school programs, adult education and literacy programs, programs directed to girls and women, health and nutrition programs, and community action programs.

To achieve these inter-relationships requires building partnerships. To move these ideas forward, it was decided to call a meeting in early November of an expanded group in order to develop concrete plans of action in these priority areas.

As a result of the New Delhi meeting, Early Childhood is again on the agenda. A general report summarizing progress toward EFA goals (and reflecting the renewed attention to early childhood development) will be available from the EFA Consultative Forum Secretariat in early 1994 (see Related Resources).

The questions we are now asking include:

- What can be done to move beyond the rhetoric of the meeting?
- What can be done to strengthen actions now being planned or carried out?
- What can be done to extend the growing, but still weak, attention to early learning and development within the priorities and budgets of organizations at international, national and local levels?
- What needs to be done that is not being done?
- How can limited resources be used more effectively?

To address these questions, and to formulate a more concrete plan of action, the follow-up meeting mentioned above was held in New York, hosted by UNICEF, November 3-4, 1994.

The New York Meeting on ECCD

The general purpose of the meeting was to promote working together in common cause in order to activate and strengthen work in the field of early childhood development. The specific purposes of the meeting were:

1. To identify areas within the field of early childhood care and development that need to be strengthened or extended (beginning with those suggested at the New Delhi meeting).
2. To suggest concrete activities that are being (or could be) carried out in order to strengthen the field, in line with purpose No. 1.
3. To identify partners in the task of improving and extending programs of early childhood care and development.
4. To arrange a mechanism (mechanisms) for mobilizing, monitoring, summing up and extracting lessons learned from activities.

Representatives from the following organisations were present for the discussion: UNICEF, the World Bank, USAID, the Bernard van Leer Foundation, Save the Children/USA, the Christian Children's Fund, High/Scope Foundation, the Consultative Group on ECCD, and The US Coalition for EFA.

A set of background notes was prepared for the meeting, including an analysis of responses to a questionnaire distributed prior to the meeting in which organizations indicated their priorities and plans.

The background document also included information on earlier EFA meetings, some questions to guide discussion, as well as a cautionary note pointing out that although early childhood development now seems to be actively on the agenda of many organizations and although considerable strides have been made since Jomtien, a great deal remains to be done. This position was backed by evidence that top officials and writers of the "World Reports" produced by the four major organizations that sponsored Jomtien have not yet incorporated early childhood development into the mainstream of their thinking.

Discussion began with efforts to specify what the group would like to see happen as a result of formulating a larger, collaborative vision and a Plan of Action. It moved quickly to how that might be done. Most of the meeting time was spent on discussion of specific issues and activities, which appear (or are reflected) in the action plan outlined in Table 1.

Identification of priority issues and areas for work

As a starting point, the participants turned to issues identified during the New Delhi meeting. These were:

- strengthening regional and national centres
- costs and financing
- indicators/monitoring
- linking early child development initiatives with primary schooling, health, adult education and women's programs.

Two other topics were added to the list, based on the original Jomtien declaration:

- social communication
- fundamental research.

A Plan of Action

For each of the priority issues, participants first indicated what their respective organizations were doing to address the issue and/or indicated the level of organizational interest in cooperating with others to address the issue. Based on this discussion it was possible, for each issue, to identify activities that could be completed over the next two years, specify who would participate, describe expected outcomes, and indicate the uses to which the outcomes would be put over the longer haul.

Although the initial time frame for the activities chosen is approximately two years, some activities are of shorter duration and will be used to mobilize interest and support over a longer period with respect to each area.

TABLE 1

TOWARD A FAIR START FOR CHILDREN:

A DRAFT WORK PLAN TO STRENGTHEN PROGRAMS OF EARLY CHILDHOOD DEVELOPMENT AND TO MOBILIZE RESOURCES

<i>ISSUE</i>	<i>RESPONSIBLE PARTIES</i>	<i>ACTIVITIES</i>	<i>EXPECTED OUTCOME(S)</i>	<i>USE</i>
1. Monitoring Programs	UNESCO*, UNICEF, WHO	Development & Application of Indicators of ECD Coverage	–statistics: ECD Coverage –permanent mechanism for data collection	–In monitoring EFA and Summit goals. –in UNESCO/ other World Reports
2. Monitoring status of children	IDRC*, UNICEF, USAID	Operational research: Child/school status profiles	–profiles and institutionalised system of data collection in 4 to 6 countries	–planning –advocacy –program evaluation & monitoring
3. Training	van Leer*, UNICEF, SCF, CCF	Develop/apply training package(s) for: –training trainers –policy makers –program staff of NGOs & donors	–tested training package –trained people –strengthened institutions	–capacity building –in various training programs of governments, NGOs, donors
4. Determining ECD Program Costs/Effects	World Bank*, UNICEF, van Leer, AKF	–Create inclusive list of benefits –Synthesize data on cost and effects –Design longitudinal studies	–concept paper –review paper –design/funding of longitudinal studies	–advocacy –evaluation –in meeting of governments and donors to mobilize funding

5. Financing ECD Programs	UNICEF*, WB, IIEP, Innocenti, CCF	–Case studies: alternative financing –Studies of who bears costs	–set of cases: forms of financing –set of studies of who bears costs	–advocacy –in meeting of gov'ts/donors to mobilize funds
6. Linking ECD & Primary Education (The transition)	USAID*, van Leer, SCF, UNICEF, AKF	–Summarize exp. with programs facilitating transition	–review of experience	–in workshop prior to EFA 96 –advocacy/mobilize program support
7. Linking ECE & Adult Education	UNDP, SCF*, AKF, ICAE	–Case studies of ECD programs combining benefits to adults & children	–set of cases	–advocacy/mobilize support for cross-generational progr.
8. Linking ECD & Health/Nutrition	USAID*, WB, WHO, UNICEF, UNDP, PAHO	–Case studies: combining H/N with psycho-social	–set of cases	–advocacy/mobilize program support –in meeting of health organizations
9. Linking ECD & Women's Programs	UNDP, SCF, UNICEF, USAID*, UNI-FEM, UNFPA	–Childcare/Women's Work cases –Analysis of gender issues in ECD	–set of cases –paper presenting gender analyses	–in Beijing '95 meeting –advocacy
10. Social Communications	US Coalition*, van Leer, EEC, UNICEF	–Bring together existing materials in a catalogue –Experimental project in 1 country	–catalogue: video bank –results from country study	–advocacy –training
11. Fundamental Research	van Leer*, IDRC, WHO	–Review of research on the child's environment as affects ECD	–review paper	–in training programs –in curricular development

(The responsible organisations are marked with an *).

Assignment of Responsibilities

Each organization took responsibility for leadership in one or more of the priority areas set out.

Liaison with the EFA Secretariat fell to the Bernard van Leer Foundation and USAID, both of whom have members on the EFA Steering Committee.

General responsibility for keeping organizations informed of progress, for seeking extended cooperation, for monitoring and for synthesizing results from the various activities within the Plan of Action was assigned to the Secretariat of the Consultative Group on Early Childhood Care and Development.

In addition, work on gender issues and the link to women's programming was assigned (jointly with USAID) to Judith L. Evans of the Consultative Group Secretariat.

Responsibilities were also assigned, where appropriate, for exploring how early childhood care and development issues might be integrated into each of several up-coming international meetings or initiatives. Events specifically identified were:

- The Nine Country Education Summit
- The Cairo Population Meeting
- The Copenhagen Social Development Summit
- The Vancouver Conference on "Stronger Children—Stronger Families"
- The Beijing Women's Conference
- Jomtien II

Plans for involving additional organizations

A long list of organizations that might be interested in collaboration was drawn up, many of whom are located in Europe. It was recommended, therefore, that a similar meeting be held in Europe in early 1994. Such a meeting would have as its main purpose to extend collaboration in activities intended to strengthen work in the field of early childhood development. It would take as its starting point the outcomes of the New York meeting. The Secretariat of the Consultative Group on Early Childhood Care and Development will convene the meeting which will be hosted by UNESCO.

At the end of 1991, there was little evidence that young children and their parents were a serious concern to those striving to achieve Education for All. Yet much was being done, especially by the organizations mentioned in Table 1, to address the conditions in which young children and their families are living. Through the New Delhi meeting, there was a renewal of commitment and attention to young children and women as part of the EFA basic education strategies. The more that specific efforts to address ECCD within countries or regions can be communicated to others, evaluated and understood, the more likely they are to contribute to the knowledge base and to the momentum that is being gained. Thus this coordinated Action Plan represents an

exciting step forward in the efforts to move from EFA rhetoric to action in creating significant supports for young children and their families around the globe.

If your organization is conducting work in ECCD, or would like to collaborate in this coordinated effort, please contact Judith L. Evans of the Consultative Group Secretariat.

PHILIPPINES: PARENTS AS LEARNERS—TOWARD PARTNERSHIPS AND PARTICIPATION...	8
LESSONS LEARNED...	12

The three case studies presented at the EFA Meeting in New Delhi were illustrative of ways in which government can be supportive of early childhood programming. Each case provides an example of a different programme approach. In Venezuela a family/home day-care model has been developed. The Kenya case study shows a preschool programme for children from 3-6 years of age, and in the Philippines the programme presented is one in which parent education is the primary focus. Each programme was developed in direct response to local need and has expanded and evolved in line with available resources.

For the Delhi EFA forum, each of the presenters was asked to include a brief description of the country, its population and some characteristics of the context within which the programme was developed. This was followed by a history of the programme, a description of how the model works, what it has meant to go to scale with the programme, and what lessons have been learned in the process. A summary of what was presented follows. Because there are so many commonalities across the countries in terms of the lessons learned, a summary of these will be presented at the end of all the case studies.

Venezuela: Programa Hogares de Cuidado Diario: Plan de Extension Masiva

Family Day-care Homes Program: Massive Extension Plan

Venezuela, a country located in the northern part of South America has a population of more than 19 million (1991), 7 million (36%) of which are under the age of 14; nearly 20% are under six years of age.

Venezuela is a country of contrasting realities. On the one hand it is rich in oil and has a well-developed technical sector. Its per capita income is more than \$2,500. On the other hand it has an extremely high urban growth rate (90% of the population lives in urban areas) and high poverty rates (67% of the population is rated as being in *total poverty*, 1991). Further, the majority of the population lacks sufficient economic resources, literacy rates are low, and infant mortality rates are high.

In Venezuela the extended family has played a significant role in the upbringing of children. But the violent social and cultural changes occurring during the last 15 years have affected the Venezuelan family, contributing to its dismantling. In many households the mother has a strong family presence while the father is very often remote. In the majority of families women need to seek work outside the home. To do that they need to find appropriate care for their children.

In response to the needs of working women, and to promote children's growth and development, the *Hogares de Cuidado Diario*, a home day-care programme, was developed in 1974. It is designed to attend to the care, nutrition, health, education and developmental needs of children up to six years of age. Home day-care was chosen as the model to be developed, because it supports and enriches a natural form of day-care in which working women turn to neighbours for help in caring for their children during working hours.

The Venezuelan home day-care programme was developed in two stages. Phase I was begun in 1974. Within the basic model women in the community were selected to receive training and provide care in their home for five children under the age of six, two of whom could be their own. Mothers were provided with appropriate equipment and educational materials to support their work. Every 20 day-care homes were supported by a technical assistance team consisting of a social worker who was responsible for administrative and functional supervision, a child care worker responsible for coordinating this programme with public health organizations, and a teacher who guided the home day-care mother in terms of educational activities to be carried out in the programme. There was a Coordinator for every three technical teams. And for every eight *barrios* there was a legal aid advisor, to be used as needed.

An exhaustive evaluation of the programme in 1978 showed that it had a positive effect on children and families, but there were a number of changes needed in order for the program to function more efficiently and effectively at a lower cost. But before it was possible to implement

the recommendations, there was a change in government and the day-care homes programme was put *on hold*.

In its initial version (Phase I), taking place between 1974 and 1988, it attained a moderate coverage of approximately 10,000 children. From 1979 to 1988 the government put more emphasis on developing more formal and conventional preschool models. Meanwhile, the home day-care model, with appropriate adjustments, took hold successfully in other countries in Latin America.

In addition to there being a change in government, the favorable economic conditions that prevailed in Venezuela during the 1970s when the programme began, deteriorated in the 1980s. Early on the government introduced an economic adjustment programme to try to halt the economic decline. This was largely unsuccessful. The marked increase in poverty rates during the 80s was accompanied by a decrease in the percentage of the Gross Domestic Product that the government assigned to social programmes, further exacerbating the situation for poor families.

In 1989, a major social protest which highlighted both the deteriorating conditions of the 1980s and the potentially regressive effects of economic adjustment forced the government to reassess its policies. A social policy was formulated focussed on alleviating the situation of the most vulnerable sectors. The social package was compensatory in nature and focussed on providing direct subsidies to specific groups. It incorporated more effective management practices and promoted the involvement of non-governmental organizations and the private sector in the delivery of social services.

An integral part of the new social policy was an expansion of the day-care homes programme. Phase II of the programme drew on previous experiences, recommendations from the 1978 evaluation, established expertise and the new political context. Phase II developments were guided by four objectives:

1. to attend to the needs of young children up to six years of age belonging to the lowest income levels;
2. to provide a direct subsidy to families at critical poverty levels with children up to the age of six;
3. to strengthen the family unit, particularly mothers (through education, improved income and increased community participation) in the process of bringing up their children; and
4. to strengthen the capacity of civil organizations to participate in actions promoting the development and welfare of young children living in impoverished conditions.

The Ministry of the Family administers and oversees the programme. The Children's Foundation, a private organization headed by the wife of the President, sets guidelines, provides technical input and is responsible for implementing the programme in about 75% of the locations. In 1993 almost 300 non-governmental organizations were also involved in implementation of the programme.

The day-care homes programme continues to outfit homes with necessary equipment and provide training for the home day-care mothers who now care for up to 8 children for a period normally running from 6 A.M. to 6 P.M. In addition to the initial training workshop, mothers participate

in periodic *learning encounters* and in special workshops. They are supported by a supervisor who is responsible for overseeing 25 homes. In the selection of home day-care mothers, preference is given to those who are: experienced in the care of children; between the ages of 30 and 45; from a nuclear family unit; with fewer than two children below the age of six; literate; and representative of the average economic situation within their community.

In order to carry out her job, the home day-care mother receives monthly allotments from the government for the care and feeding of each child and a monthly allotment from the mother of each child. In the poorest communities, the mothers of participating children are not required to pay and the cost is assumed by the government.

In Phase II a new variation on home day-care has been added: multi-home care in which 30 children are tended by 3 home day-care mothers in a community setting specifically selected or constructed for the purpose. These are designed to serve densely populated areas and have incorporated children with special needs.

In 1992 and 1993 the Phase II programme was evaluated, using a representative sample of day-care homes. Information gathered was used to make adjustments in the programme. The programme is meeting the needs of women and children. The experience has verified the viability of providing care in home-like settings with community mothers in charge. By 1993, after four years of the expansion phase, the programme is reaching 236,000 children. The cost of the programme is estimated at \$39 per child per month.

Source: Ministry of the Family and the Children's Foundation. *Programma de Cuidado Diario: Plan de Extension Masiva. Venezuela, A Case Study*. Paper prepared for the EFA Forum, New Delhi, September 9-10, 1993. Caracas, Venezuela, 1993. Available from UNICEF Apartado Postal 69314, Altamira 1062, Caracas, Venezuela.

The nutritional part of the Venezuelan programme is the most costly component, representing 59% of the monthly costs. Professional support for the home day-care mother and administrative costs of the programme together represent 25% of costs, and the subsidization of the day-care home mother's salary is 23% of costs. The remaining 3% is for educational materials. The programme provides full-day care for the child. While this is important in terms of supporting the child's development, another major benefit of the programme is that it is supportive of women's work outside the home. Thus the true beneficiaries are not only the children but also the families.

Venezuela provides an example of a full-day programme for children, which is primarily home- rather than centre-based. In the Kenya case study the approach has been to provide a half-day centre-based preschool programme for children 3-6 years of age. While in Venezuela impetus for the programme came from an understanding of the intersecting needs of women and children living in urban areas, in Kenya the programme began out of concern for the educational needs of the child, particularly those living in rural areas. The Kenya programme has since expanded into a more holistic view of what can be provided through a preschool programme. But we will let the case speak for itself.

Kenya: A Case Study of Early Childhood Care and Education in Kenya

Kenya whose population in 1992 was 25 million, has one of the highest growth rates in the world (3.8%). 59% of the population is under 20 years of age; 18% are under the age of five, many of whom are in preschools because of the commitment of parents and the community to providing a preschool experience for the child.

There is a long tradition of preschool education in Kenya. The first preschools were started in the 1940s by and for the exclusive use of the European and Asian communities. Later preschools were developed in African locations in urban areas and on coffee, tea and sugar plantations. After independence preschool education expanded throughout the country.

An important variable in the widespread availability of preschools is the *Harambee* or self-help spirit which the late President Kenyatta fostered. In essence what this means is that when a community defines a need, it creates a programme to meet that need. In many villages parents have wanted preschools for their children and so they have created them. They find a location for the class and choose a woman to care for children 3-6 years of age. As a result early childhood care and education programmes (ECCE) in Kenya serve the entire cross-section of social, economic, cultural and geographic groups within the society.

Prior to the 1970s there was no organized curriculum, nor other support materials for use in the preschools, and many of those teaching in these schools were untrained. Because they lacked training, many of the teachers used formal teaching methods equivalent to those used in the primary schools with older children. To address the situation presented by the ever-increasing numbers of preschools and the lack of appropriate support for them, in 1991 the Kenya government, with assistance from the Bernard van Leer Foundation created the Preschool Education Project, based at the Kenya Institute of Education (KIE). The objectives of the project were to improve the quality of preschool education through the development of viable training systems, and the creation of curriculum and other support materials for use by trainers, teachers and children.

Several events during the 1980s shaped the way in which preschool services are being offered nationally. In 1980 responsibility for preschools was shifted from the Ministry of Culture and Social services to the Ministry of Education (MOE) which is now responsible for the administration of preschools. The MOE has an infrastructure that is able to provide support to preschools anywhere in the country.

Another important event was the move in 1983 to decentralize government. The focus of development was shifted to the district level. The result of this shift is that district and local governments have taken on the main responsibility for ongoing support of preschool education, while MOE is involved in the formulation of policy guidelines for early childhood programmes, registration of preschools, coordination of government grants and funds from external donors, and provision of early childhood personnel at all levels.

When the Preschool Education Project was evaluated in 1982, it was recommended that the activities of the project be continued. This was done through the creation of a National Centre for Early Childhood Education (NACECE), established in 1984. This was followed in 1985 by implementation of District Centres for Early Childhood Education (DICECE), to facilitate decentralization of ECCE support.

NACECE is located within the Kenya Institute of Education and it is responsible for: developing training systems for ECCE personnel; developing and disseminating curricula for ECCE programmes; identifying, designing, undertaking and coordinating ECCE research; facilitating interaction between agencies and sponsors; coordinating and liaising with external partners; and informing the public of needs and developments within the ECCE programme.

The functions of the DICECE are: training of preschool teachers and other personnel at the district level; supervision and inspection of district preschool programmes; mobilization of local communities to improve the care, health, nutrition and education of young children; development of localized preschool curricula; and evaluation and research related to the preschool child. The DICECE are staffed by NACECE trained trainers, accountable to the District Education Officers for their day-to-day operations.

Training has remained one of the most important functions of the NACECE/DICECE programme because it equips teachers and trainers with knowledge and skills which help them to provide quality services to children and to mobilize the parents and local communities to improve the welfare of young children and families. Trainers are provided with a nine-month induction course that includes a residential and a field component. Teacher training involves a two-year inservice course which has six residential sessions (during school holidays) alternating with field sessions during term time.

In terms of the actual preschool programme, NACECE/DICECE has adopted a holistic approach to the support of children's growth and development. That means that it seeks to include health, nutrition, growth monitoring and promotion as well as educational activities within the programme.

One of the unique characteristics and strengths of the ECCE programme in Kenya is its policy of encouraging partnerships, at all levels. *Parents and local communities* are the most important partners. They have started and currently manage over 75% of the preschools in the country. Parents and local communities provide land and funds for the construction and maintenance of the physical facilities. They also provide furniture, materials and labour and they pay the teacher's salary. In some communities feeding programmes are also a part of the preschool; parents provide the ingredients and prepare the food.

Complementing the work of the community are *local authorities* who pick up the costs (equipment, furnishings and teacher salary) of running preschools in towns. Fees are charged in these schools to help cover the costs.

From the beginning, *voluntary organizations, religious bodies and companies* have been heavily involved in preschool provision. Religious groups have established their own preschools in the

church/temple/mosque. Firms, cooperatives, and plantations have also established preschools for children of their employees. The main support from these preschools is the provision of physical facilities, materials, furniture, feeding programmes and payment of teachers' salaries.

The *Ministries* involved in preschool provision include the Ministry of Health and the Ministry of Culture and Social Services, in addition to the Ministry of Education. And as noted earlier, *external partners* have been and continue to be important. Over the years these have included the Bernard van Leer Foundation, the Aga Khan Foundation, and UNICEF, who have provided financial support for the training of teachers, the purchasing of equipment and materials, curriculum development, and parental and community education. NACECE has taken on the primary responsibility for coordinating the actions of the various partners and involving them in a meaningful way.

Decentralization of the programme to the district level has provided flexibility and variation in terms of facilities provided and activities undertaken. The preschool setting and curriculum materials, for example, differ from place to place depending on the resources available, leadership abilities and motivation of the communities.

Decentralization is a healthy feature of the programme. Communities are allowed to develop appropriate, affordable and relevant services without external pressure and competition, and at their own pace. The curriculum guidelines developed by NACECE are just that, guidelines. Localized materials in the form of stories, poems, riddles and children's games have been developed which preserve and strengthen local culture and tradition.

The Kenya early childhood programme has grown because it is rooted in the community. Through workshops and seminars organized by the DICECE, parents and community members have been encouraged and empowered to increase their participation beyond provision of physical facilities. They provide the feeding programme, they take part in collecting, telling and demonstrating stories, songs and dances in the mother tongue. The incorporation of tradition and folklore into the curriculum make the community feel proud of their contribution to the learning and development of their children. **One lesson from Kenya is that the community is a very important resource for the development of the ECCE programme and must continue to be tapped and appreciated.**

Today the programme is serving more than 900,000 children. This is approximately 30% of the 3-6 age group. Government expenditure on preschool programmes is only one-tenth of one percent of the national education budget (or \$.61 per child per year). This compares to 60% of the education budget going to primary education, 15% for secondary and 22% for universities. The great majority of the costs of the preschools are borne by the communities and external donors. (Myers, 1992:23) The current expenditure on ECCE activities is extremely low. If it were increased to even 1% of the budget it could provide more comprehensive and higher quality services.

Kipkorir, L.I. & Njenga, A.W. (1993) "A Case Study of early Childhood Care and Education in Kenya." Paper prepared for the EFA Forum 1993, New Delhi, 9-10 September 1993.

Myers, R.G. (1992). Towards an Analysis of the Costs and Effectiveness of Community-based Early Childhood Education in Kenya: The Kilifi District. Report prepared for the Aga Khan Foundation.

In Kenya the programme has been able to go to scale because of its heavy reliance on the community to sustain the programme, and the monies provided by external donor agencies. While this programme is not nearly as expensive to the government as the Venezuelan programme, it would be a mistake to make direct cost comparisons. The Kenya model is structured differently and designed to meet a different need. In addition, while Kenya is experimenting with growth monitoring and nutritional inputs, it has not yet built in some of the costly health and nutrition supports that exist within the Venezuela model. In addition, there is heavy reliance in Kenya on external support to maintain the system.

What the two models have in common is that they provide direct service to the child. The case study from the Philippines has taken a different approach. There the emphasis is on reaching parents, with the intention of reaching the child through the parent.

Philippines: Parents as Learners—Toward Partnerships and Participation

The Philippines is the home of 11.5 million families, 62 million people (1990). Approximately 46% are below the age of 18, 14% are under the age of five. The people are predominantly Malay, with Chinese, Spanish, Indian and North American settlers forming the minority of the population. There are 110 cultural and linguistic groups in the country; over 87 languages and dialects are spoken.

The Philippines is a land of contrasts. The land is rich and blessed, but the majority of the people live in abject poverty. There are wide disparities between the life conditions of Filipino families across socio-economic groups. While the elite reside in well-guarded mansions, the plywood, plastic and galvanized iron sheet 'homes' of the urban poor make up the biggest squatter colonies in that part of Asia. Between 1985 and 1988 the top ten percent of all families received more than one-third of all family income. 75% of Filipino families live below the poverty line.

Beyond the physical and social contrasts, the clash of ideas between the pervasive colonial mentality and the emerging fierce nationalism is evident in the people's daily lives.

The Filipino family is undergoing considerable change. Rapid urbanization, rural-urban migration, un- and underemployment, overseas employment, the insurgency problems and continuing war in certain areas of the country are all forces at work. Also, the changing and

emerging role of Filipino women at all levels of society is a critical factor in the changing lifestyles and structures of the Filipino family.

Traditionally, children have played a very important role in the Filipino family. It is said that children give the Filipino family its form and structure. Generally, parenting is considered a private, family affair. Contemporary decision-making about parenting is a result of traditional wisdom learned from parents and grandparents, blended with knowledge gained from available literature. At best this results in a good balance between sound indigenous practices that help to transmit the Filipino cultural heritage and more progressive child-rearing practices. Sometimes it can result in conflict and confusion. As families are faced with new challenges and traditional supports are lacking, there is renewed interest in developing support systems for parents to help them achieve a better balance.

Parental support programmes have a long history in the Philippines. They were begun originally in the 1930s by the then Department of Agriculture. Over time parent programmes have been implemented by the Department of Health, Department of Social Welfare and Development, the National Population Commission, the Department of Education, and the Bureau of Agricultural Extension. Government efforts have been complemented by contributions from major donor agencies such as UNICEF and WHO. It is out of this history of parent support programmes that the **Parent Effectiveness Services (PES)** came into being.

A basic premise of the PES is that by reaching parents it is possible to reach the children. PES was developed in 1978 by the Department of Social Welfare and Development (DSWD). To create the programme, groups of parents were organized at the village (*barangay*) level to determine the type of support they required. To further understand the needs, parent congresses were organized at the municipal, regional and national level with representatives from the neighbourhood groups as participants. A parent education programme was then designed, based on what was learned through this consultative process. A manual was developed which prescribes the content and methods for the parent education programme. This manual is used by social workers as they work with communities.

PES, which currently resides in the Bureau of Family and Community Welfare (BFCW) within the DSWD, is part of a much larger government-sponsored Early Childhood Enrichment Programme (ECEP) that includes centre-based (day-care centres, child minding centers, supervised neighborhood playgroups) and school-based programmes. The ECEP was developed in collaboration with UNICEF, which funded the programme from 1981-1983. In 1984 the DSWD took over full responsibility and now government funds cover salaries of programme supervisors, training of day-care workers, and the purchase of teaching materials for the home-based programme. Since 1991, under the Local Government Code, powers have been decentralized. Local government units are now directly in charge of implementing the PES.

How does PES work? The primary strategy within PES is to reach parents through the Neighbourhood Parent Effectiveness Assembly (NPEA). This is a group of 10-20 parents who get together weekly to discuss common parenting problems and their solutions. While families with children from birth to 6 years of age who might benefit from the programme are identified by the

trained ECCD worker from the local government unit, participation is voluntary and open to all interested in attending.

A session generally consists of the following:

1. Opening activities help bring the group together.
 2. There is a discussion of how the parents applied what they learned from the previous session.
 3. The topic scheduled for the day is presented through an activity. This could include such things as responsible parenthood, family relationships, health care, child development, recognition and management of disabilities, nutrition, etc.
 4. Specific activities are identified that parents can undertake in relation to the topic.
 5. The session ends with a summary of the major points and planning for the next session.
- Resource materials are available for parents to borrow and purchase.

Home visiting is a complement to the NPEA. Home visits are made when parents join the assembly to orient them to the group. The visit provides the social worker with an opportunity to learn more about the family as well. From then on home visits are used on an as-needed basis. When families require additional support or when they have missed the group for a number of sessions, or if parents request a home visit, these are made by the PES staff. A new component of PES is a radio programme being developed in cooperation with the Philippine Children's Television Foundation.

There are two type of staff for the programme. There are the professional Social Workers, hired by local government. They receive a five-day training in the implementation of PES. Guided group discussion and role playing are an important part of this training. The social workers work side-by-side with PES volunteers, who are parents from the community that have been trained to facilitate the groups and conduct home visits. Training for the volunteers includes a 3-day orientation, followed by a one-month practicum. This is followed by another 2 days of training to consolidate what the volunteer has learned and to plan future activities. Annually there is a refresher training.

In 1987-89 an evaluation was conducted. It revealed strengths and weaknesses of the programme, but by and large PES was deemed effective. The issues identified in the evaluation were addressed as an expanded version of the programme was formulated. To strengthen the program, PES training was revised, and in 1991 a new handbook was produced and additional materials were developed for use by the PES volunteers.

The evaluation revealed that the quality of PES depends greatly upon the skills of the PES volunteer and the support mechanisms available to them through the programme supervisors at the national, regional and municipal levels.

UNICEF continues to be a partner in the implementation of PES. In the programme of cooperation between UNICEF and the government of the Philippines for 1994-1998 there are several proposed actions:

The **home-based programme will be strengthened** as this is seen as a major strategy and a low-cost approach to providing ECCD services to children. The expanded home-based component will be implemented in 7 depressed provinces where there is a convergence of social services, in 13 provinces where the low education levels indicate greatest need, and in 5 provinces affected by natural and man-made disasters.

There will be **increased investment in training and supervision** and the development of training materials. The goal is to train 2,000 community volunteers (parent leaders) as facilitators and 325 people to serve as supervisors. 150,000 different sets of materials will be distributed to 3 million parents in 25 provinces. Other materials will be developed to facilitate training.

A core of trainers will train 900 (2 for each *barangay*) youth volunteers on approaches and techniques in **mobilizing community participation and support** for early childhood programmes. Through the use of theatre arts and indigenous folk media it is hoped to get the community more involved in helping to sustain the programme. One goal is to get a variety of NGOs involved in the programme.

An additional goal will be to expand programme content in terms of: **activities that promote gender equity; increasing the role of fathers in child-rearing; and issues related to shared and single-parenting.**

In 1978 when PES started it was being implemented at the municipal level by 120 social workers. In 1991, 143,000 parents were served. In 1992 this increased to 160,000 parents (192,146 children) in 1,500 municipalities throughout 14 regions of the country. Working with these parents were 1,672 Early Childhood Care and Development workers in local government units and 1,452 PES Volunteers. PES has also been implemented in centre-based programmes by 18,633 day-care workers.

The costs of this programme were calculated, based on the government and UNICEF input and the number of families and children served in 1992. The cost per parent was approximately \$1.00/year. The costs per child were \$.81/year. The time contributed by the parent volunteers was not taken into account in these calculations.

In sum, all over the Philippines, through the PES and the many NGO programmes for parents and families, lessons are being learned about children and parents and how they grow, develop and learn. These teach us that an investment in parents is a major investment in child growth and development. And while parent education programmes will not be the major solution nor substitute for the basic social services, they are part of a broader framework of community development.

Lessons Learned

While there are a number of lessons that have been learned by the three projects that are specific to the kind of programme developed and the country context, there are commonalities across the cases that are worth exploring. They are as follows:

1. First and foremost the cases illustrate the desirability of parent and community participation in the process of developing the service. They need to be more than recipients of a service. Programmes must be designed in collaboration with them and parents must be an integral part of its implementation in order to assure sustainability.
2. Within the government there need to be policies, laws and structures that provide support for the development of ECCD programmes. Without political will and commitment, localised ECCD programmes cannot hope to be expanded to a significant degree or sustained over time.
3. Models for the collaboration of government and non-governmental agencies and organizations are being developed. Governments are unable to and should not take on sole responsibility for the provision of early childhood programmes. Partnerships need to be developed which build on the strengths of what both government and the nongovernmental agencies can provide. There is no *right way* for this to happen. The history, expertise and experience of government and NGOs in each country will dictate the type of partnership that it is possible to create. These three cases represent different ways this can happen.
4. To achieve an appropriate level of coverage, it takes time. Massive programmes cannot be implemented overnight. The three cases illustrate the importance of developing pilot programmes and evaluating them sufficiently so that appropriate changes can be made as the programmes are expanded.
5. The creation of supportive structures is crucial. Those directly providing the services need appropriate training and on-going supervision and support as they work with children and families.

The three cases presented above represent different ways in which governments can support the EFA goals of basic education for all. As noted, no formula exists to guarantee success in every situation. Programmes need to be developed within the context of needs and resources, and with full participation of all the stakeholders.
